Learning as Inquiry

Demonstration Session

One significant event that International Baccalaureate (IB) Primary Years Programme (PYP) learners look forward to is the exhibition. The exhibition is a culminating activity in the IB Primary Years Programme, which provides students an opportunity to synthesize and apply their learning of previous years. It is an in-depth collaborative inquiry among the students that provide them with an opportunity to demonstrate independence and responsibility for their own learning. It provides an authentic process for assessing student understanding.

During this class, we aim to see the connection and relationship of the class-designed exhibition unit. The students will discuss how their lines of inquiry are connected with the others by giving evidences that they have gathered throughout their summer vacation. The teacher will serve as a facilitator during the discussion. After finding the relationship, the students will be given the opportunity to reflect on their individual and class efforts on their journey to exhibition through self-assessment.
